

Panel Design Options

Steelway manufactures a comprehensive selection of high quality steel roof, wall and liner panels that are ideal for new buildings or retrofit projects using any type of construction.

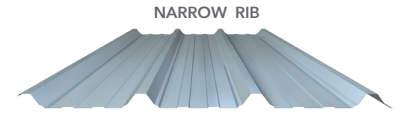

Roof, Wall and Liner

STORMSEAL

ROOF, WALL & LINER

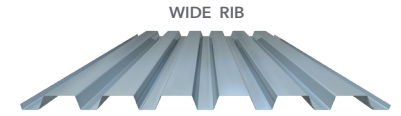

This popular industry standard profile suits any project and is available in both wide and narrow rib versions. This strong and versatile panel has 36" wide coverage with 1 1/2" deep ribs in 12" spacings.

STRUCSEAL

ROOF, WALL & LINER

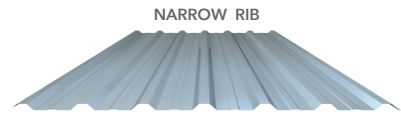

For demanding applications or for a unique look, this durable heavy duty panel is a great choice. With 1 1/2" deep ribs on 6" spacings, this 36" or 30" wide coverage panel has the strength for any application. It is available in both wide and narrow rib versions to suit the job.

DIAMONDSEAL

ROOF, WALL & LINER

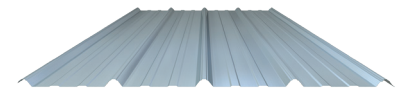

An extremely popular, low-profile panel for any application or construction type and is a wise economical choice. Available in both wide and narrow rib versions, this panel features crisp uniform 5/8" deep ribs on 6" spacings covering the 36" wide panel.

VERSASEAL

ROOF, WALL & LINER

As an all around versatile option, this economic 3/4" rib, low profile panel features an anti-syphon groove for a greater watertight application. Each sheet covers 36" with 9" spacing between ribs.

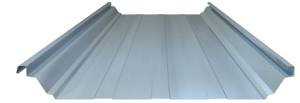

Standing Seam Roof

RTL-24

STANDING SEAM ROOF

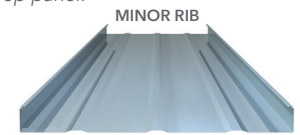

As the benchmark of roofing systems, this standing seam roof features extreme weathertightness and superior wind uplift performance for high or low pitch applications. The system uses concealed steel clips to eliminate screws penetrating the 24" wide, 3" deep panel.

CAPLOC

STANDING SEAM ROOF

This symmetrical standing seam, floating panel system features a mechanically seamed cap to ensure weathertightness. Ideal for architectural applications, this panel is available in five different pan types (including flat) and widths of 16", 18" and 24" with a 2 3/8" panel height.

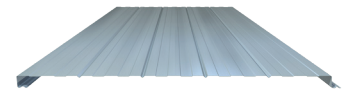

Liner

LINERSEAL

ROOF & WALL LINER

LinerSeal is the basis of a wall or roof standoff insulation system and provides an attractive low profile look to the interior of any building. The 31 1/2" (800mm) wide panel can be ordered with optional factory applied caulking for use as part of a vapour barrier system.

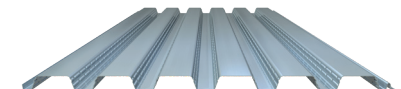

Decking

RD-156/CD-156

ROOF & COMPOSITE DECK

Heavy duty steel deck is the superior choice for built-up roofs and concrete floor slabs. As a 36" wide panel, it features a hook lap and 1 1/2" deep ribs on 6" centers. Embossments are standard for composite applications. Flat lap for screw down installation is available.

Stock Materials and Colours

Please contact a sales representative for current material and colour availability. Many standard and optional colours and coatings are available upon request.

Trims

Steelway offers a wide range of standard trims to compliment our panels. Custom trims are easily designed and made to order.
